The image shows a web browser window with the address bar displaying 'http://validator3.org/#/nu/textarea'. The page title is 'Nu Html Checker'. Below the title, a message states: 'This tool is an ongoing experiment in better HTML checking, and its behavior remains subject to change'. A section titled 'Showing results for contents of text-input area (checked with vnu 26.1.5)' contains a 'Checker Input' form. The form has a 'Show' section with checkboxes for 'source', 'outline', 'image report', and 'errors & warnings only', along with an 'Options...' button. Below this is a 'Check by' dropdown menu set to 'text input' and a 'css' checkbox. The main area contains a text input field with HTML code for a registration confirmation page. The code includes meta tags for ID & Name, Course, Assignment, Date, and Description, as well as DOCTYPE, html lang, charset, viewport, description, keywords, and author. A 'Check' button is at the bottom left of the input area. At the bottom of the page, a green banner states 'Document checking completed. No errors or warnings to show.' Below this, it says 'Used the HTML parser.' and 'Total execution time 4 milliseconds.'

index page

There were some warnings and errors like

In the footer, I jumped from `<h2>` (in main content) directly to `<h4>`:

And

`<nav id="main-navigation" role="navigation">`

`<nav>` already has an implicit navigation role

W3C validator warns because ARIA role is redundant

But After I edited the whole pages errors and warnings finally all results seemed to perfect

0 warnings

0 errors

all pages done
